

SIMCom WCDMA module flash update tool operation guide

1. Connect the EVB to PC through USB port
2. Power on the module.
3. Execute the **QDL tool** inside the **FW package**.

4. It detects the com port and the image folder automatically, after that you can press the **"start"** button to upgrade now.

5. When it is finished, "Update successful" information will be shown in popup window as below. Close the tool and reset the module.
